

Technology Grant Justification

Research has shown students are successful through highly visual, interactive educational environments. The Gustavus Adolphus Learning Center has received funding through the Smart Schools Bond Act (SSBA) to improve learning and opportunity for our students by acquiring new learning technology equipment. As a part of our technology plan, our goal is to ensure students are career and college-ready by participating in a wired classroom environment, including the use of smart projectors and interactive white boards, computers and tablet devices.

Students today are accustomed to interactive instruction that addresses their multiple intelligences, learning styles and individual educational needs. Through the Smart Schools Bond Act, the Gustavus Adolphus Learning Center will purchase HDMI Networkable projectors, cable and ceiling mounts for the use in our classrooms, to support our students' audio and visual learning needs.
